1. It is noted with regret that upon further consideration of the claims by several Supervisory Patent Examiners, a new restriction requirement is necessary as detailed below.

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 19 and 23, drawn to methods of identifying or assessing candidate molecules for treatment of a CNS disorder using an animal model, classified in class 514, subclass 1.
- II. Claims 20 and 21, drawn to methods of identifying or screening compounds which selectively bind to and/or reduce the activity of a DAO or DDO polypeptide, classified in class 435, subclass 7.1.
- III. Claim 22, drawn to a method of screening compounds which reduce the expression of the DAO or DDO polypeptides or mRNA in cells, classified in class 435, subclass 6, for example.
- IV. Claims 24-29 and 33-43, drawn to methods of treating an individual suffering from a CNS disorder, classified in class 514, subclass 1.

**If Group I, II, or III is elected, dependent claims 30-32 will be examined along with the elected claims.**

**Sequence Election Requirement Applicable to Groups II, III, or IV**

In addition, each Group detailed above reads on patentably distinct Groups drawn to multiple SEQ ID Numbers. The sequences are patentably distinct because they are unrelated sequences, and a further restriction is applied to each Group. For an elected Group drawn to amino acid sequences, the Applicants must further elect a single amino acid sequence. For an elected Group drawn to nucleotide sequences, the Applicants must elect a single nucleic acid sequence (See MPEP 803.04). Specifically, each of Groups II-IV contains a claim(s) referring to nucleic acids of SEQ ID NO:2-6, 19, and 20, and to polypeptides of SEQ ID NO:7-10, 21, and 22.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation and different functions. Invention I requires the use of an animal model of a CNS disorder; invention II relates to compounds binding to DAO or DDO polypeptides or reducing their activity; invention III relates to a cell assay in which DAO or DDO polypeptide or mRNA is detected; and invention IV relates to treating an individual suffering from a disease. The modes of operation and functions of these inventions are thus completely different.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, or because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kenneth R Horlick whose telephone number is 571-272-0784. The examiner can normally be reached on Monday-Thursday 6:30AM-5:00 PM.
